

Senior Backend & Cloud Engineer

Antigravity Technologies • San Francisco, CA (Remote / Hybrid) • 4+ Years Experience Required

About the Position:

We are seeking a high-caliber Senior Backend Engineer to architect, build, and maintain our high-throughput distributed microservices. You will collaborate with product and infrastructure teams to design resilient RESTful APIs, optimize PostgreSQL queries, and deploy containerized services onto AWS.

Key Responsibilities:

- Design, implement, and maintain scalable backend microservices using Python, FastAPI, and PostgreSQL.
- Architect resilient database schemas, read replicas, and caching strategies using Redis.
- Build automated CI/CD deployment pipelines using Docker, Kubernetes, and AWS.
- Write comprehensive unit and integration tests with Pytest to ensure 90%+ code coverage.
- Collaborate closely with frontend engineers and product teams on API contract designs.

Mandatory Required Skills:

Python, FastAPI, PostgreSQL, Docker, REST API, Git

Preferred / Bonus Qualifications:

AWS, Kubernetes, Redis, CI/CD, Linux, Microservices

Education Requirements:

Bachelor's Degree in Computer Science, Software Engineering, or related STEM field
